

Using iPad Apps to Create Music Part 2 - Grades 4 and up

App #2: Musical Memory

This app is a musical memory and matching game, similar to the old Simon electronic game, where students are expected to repeat a visual and sound pattern.

Students will be presented with a screen with six colored circles. At first, one circle will light up and play a musical tone. The student will then tap that circle to score points.

Next, a second circle will follow the first one, adding to the pattern. As the game goes on, one circle/pitch will be added to the pattern, and continue in speed and complexity until the student makes a mistake.

There is an accompanying video demonstrating how the game works.

What You'll Need: iPad or iPhone
